

ProLine

outdoor grilles

Robust and stylish outdoor grille

MEINERTZ ProLine outdoor grate is a steel grate consisting of a number of 20x11x1.25 mm steel hollow sections. Delivered in many different widths and in lengths up to 6000 mm and with or without transverse grate end. ProLine outdoor grating can also be made in curved versions to match the shape of a building. The grate can be removed so that the duct can be cleaned.

The grate can withstand a 100x100mm point load of up to 250 kg.

Maintenance

The grate is basically hot-dip galvanized and created to withstand wind and weather. The galvanization protects the steel against degradation and provides a nice and even surface that lasts for many years. Galvanized steel has a minimum of maintenance, where only clean water or ordinary soapy water must be used.

In the lacquered version, the grate is wet-lacquered on top of the galvanization, which requires a more gentle maintenance. An ordinary cleaning agent that does not contain abrasive can be used. Scratches and damage to the paint's surface are repaired with traditional wet paint in a spray can or with a thin brush.
